

Horizon Elegance 76

The Horizon Elegance 76 is unique in style and function, and designed to the highest standards. The craftsmanship with detailed wood and stainless steel, will instantly give you the feeling of luxury. Cruising with this ship gives a feeling of safety, excitement and freedom. The hydraulic driven stabilizers won't make the ship rolling, even with high waves. Generators and a water maker will make the ship independent from any marina and make it possible to stay on anchor for long periods as long as there is enough fuel. The ship is easy to handle by just two persons. A remote control operating the engines, bow and stern truster makes it simple to moor the ship anywhere you want. Maintenance is easy since high quality equipment is installed and placed in a way it is easy to reach.

The Horizon Elegance 76 will give you the experience you won't forget.
